
GENERALISED LEONARDO NUMBERS

Carlos M. Da Fonseca^{1,*}

¹*Kuwait College of Science and Technology, Kuwait*

ABSTRACT

In this talk, we provide an overview of the history of Leonardo numbers. We review some of the most recent results concerning this sequence, together with several relevant historical interconnections. We also present a new perspective on these numbers and discuss several conjectures and open problems related to their extensions, particularly those involving modular periodicity.

Keywords Leonardo numbers; recurrence relations
